

A Decade of Performance

Superior Performance and Savings

For more than a decade, **SEALECTION® 500** has been the flagship product for **Demilec (USA) LLC.**'s line of industry-leading spray foam insulation products. It is an environmentally friendly, easy-to-apply insulation that delivers superior performance and money-saving benefits to builders, contractors and homeowners. **SEALECTION® 500**'s polyurethane formula reduces energy loss by creating an airtight seal that tightly fills cracks, gaps and joints. So builders can right-size their HVAC systems to heat and cool larger spaces with smaller units. In some cases, HVAC unit tonnages have been reduced by as much as 40 percent and consumer heating and cooling costs have dropped by as much as 50 percent.

Easy Installation. Life-Long Efficiency.

SEALECTION® 500 is a single-application spray foam that is easy to install and finish. You can avoid the time and trouble of fasteners and the inconvenience of reaching hard-to-reach places. Within seconds after application, **SEALECTION® 500** expands up to 120 times its liquid volume to form a semi-rigid barrier that stops air leakage and movement within the building envelope by sealing cracks, crevices and hollow spaces. That means less expense for builders, shorter application and finishing time for contractors, and lower energy bills for homeowners.

Once in place, **SEALECTION® 500** maintains its performance for the life of the building. Unlike many conventional insulations, time and temperature changes have no effect on spray foam insulation's R-value. **SEALECTION® 500** never deteriorates or decomposes, and it never settles or compacts into cavities. You can always count on it to deliver the same efficiency it creates on day one.

Environmentally Friendly

SEALECTION® 500 contains no ozone-depleting chemicals, gases, fibers or asbestos.

Energy Efficiency

SEALECTION® 500 creates an airtight seal, increasing energy efficiency by reducing the work load of heating and cooling systems.

Lower Expenses for Builders

High-performance insulation allows contractors to right-size their HVAC systems to smaller units, in most cases. In some cases, the reduction in HVAC tonnage can be as much as 40 percent.

Lower Expenses for Owners

Price-conscious consumers enjoy the lower energy costs experienced with **SEALECTION® 500**. In some cases, heating and cooling costs have been slashed by as much as 50 percent.

Quieter

Noise pollution is reduced because airborne noise can no longer seep through walls. Areas where the difference will quickly be appreciated include offices, classrooms, master bedrooms, laundry rooms, media rooms and plumbing runs.

Healthier

An airtight seal means that dust, allergens and germs have nowhere to go, allowing a better quality of life in a cleaner and healthier environment.

Dependable Performance

SEALECTION® 500 spray foam insulation maintains peak performance because it never deteriorates or decomposes due to time, temperature or usage.

Quieter, More Pleasant Spaces

SELECTION® 500 helps create a quieter, more pleasant and more peaceful atmosphere. **SELECTION® 500** is ideal for creating quiet spaces because it fills cavities between walls and ceilings to absorb unwanted noise. So whether it comes from outside traffic, noisy neighbors, work crews, interior game rooms, media rooms, classrooms, offices and/or play rooms, intrusive noise stays where it belongs.

Environmentally Safe. **Earth Friendly.**

For more than a decade, **SEALECTION® 500** has been an environmentally friendly, easy-to-apply spray foam insulation that delivers superior performance and money-saving benefits to builders, contractors and homeowners. It allows builders to use smaller, more energy-efficient units to heat and cool their buildings; lets contractors conveniently and quickly install and custom finish their insulation; and offers homeowners lower energy costs and a healthier, cleaner in-home environment.

Cleaner, **Healthier** Homes

SEALECTION® 500's airtight seal creates a healthier, cleaner, more comfortable home environment by preventing air from entering or circulating through the building cavity. Less air movement means in-home air carries less dust, dirt, allergens and pollens.
